

Mute Notifications for One Class

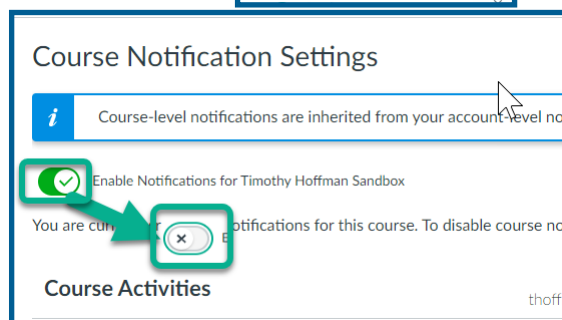

Generally to control your Notifications, you use your Account—Notifications settings to control how all your classes send you notifications. But what if you have one or several (especially development classes) that are different from the standard? Here is how you can modify a single class.

Turn off All Notifications

- 1) Enter the course in question
- 2) On the Home Page, bottom of the Home Menu, click **View Course Notifications**

- 3) In *Course Notification Settings*, Slide the *Enable Notifications* slider into the Disabled position
- 4) You should no longer receive notifications for this course.

Modify Notifications

- 1) Enter Course Notification Settings as above.
- 2) Leaving the General Slider alone, visit each of the notifications you wish to modify.
- 3) Set the notification how you want:
 - a. Click the current status Icon
 - b. Click the new Status on the drop down
- 4) No need to save, these settings take effect immediately
